Exercise 1

Substitute the plane wave solution

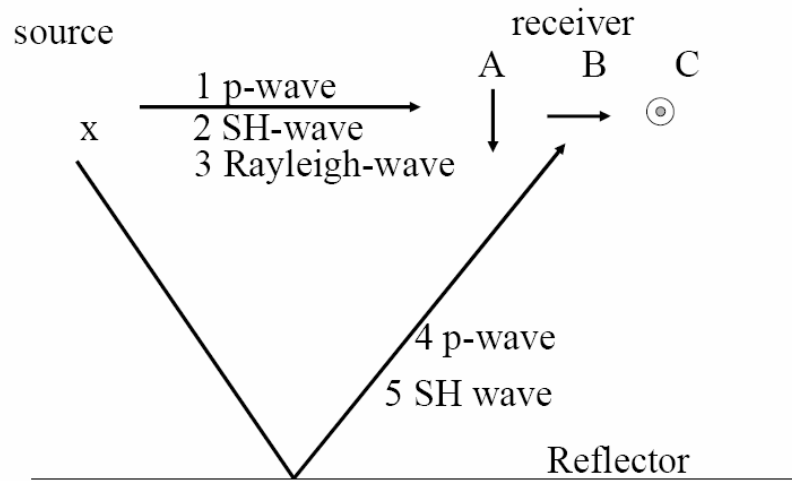

$$F = F_0 \exp[j(\omega t - kz)]$$

into the wave equation

$$\frac{\partial^2 F}{\partial z^2} - \frac{1}{c^2} \frac{\partial^2 F}{\partial t^2} = 0$$

and express the velocity c in terms of ω and k

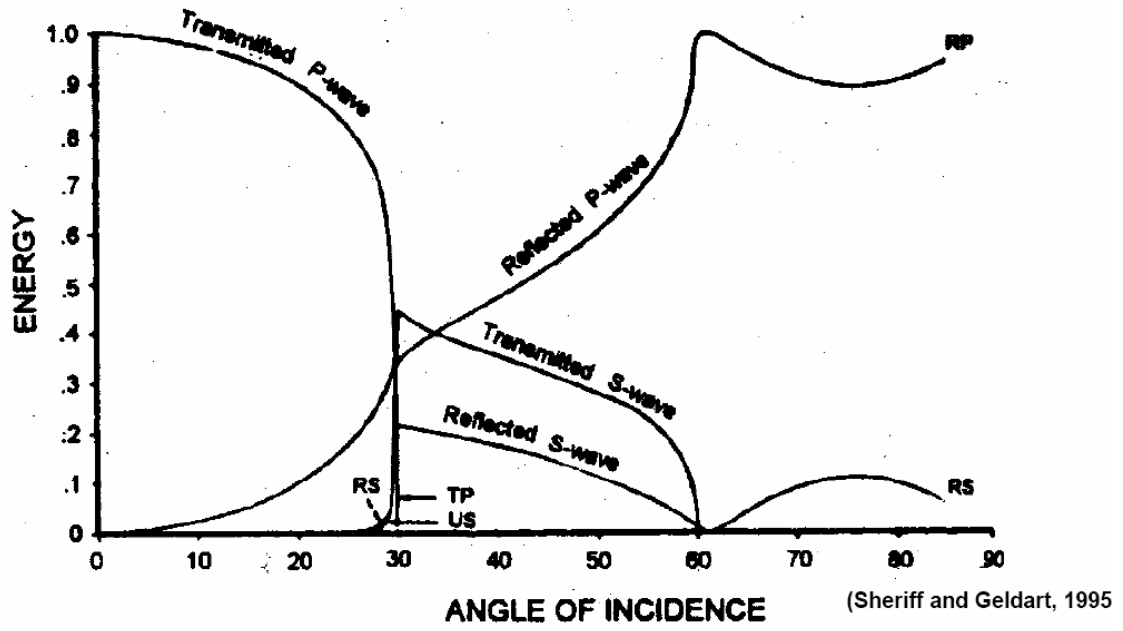

Exercise 2

For which component(s) of the receiver (A, B, C) do we measure a response in the five cases shown above?

Case	Receiver Geophone		
	A	B	C
1	?	?	?
2-5	?	?	?

Exercise 3:
 Angle-dependent reflection- and transmission-coefficients for
 an incident P-wave

Seismics

Find values for: $v_{P1}/v_{P2}=?$ $\rho_1/\rho_2=?$ $v_{P1}/v_{S2}=?$

Exercise 4:
 Angle-dependent reflection- and transmission-coefficients for
 an incident P wave

Seismics Determine the ratio $Z_2/Z_1 = ?$

Exercise 5

Check GPR reflection coefficient equation from Keary, Brooks and Hill (p. 225):

$$R = \frac{V_2 - V_1}{V_2 + V_1} = \frac{\sqrt{\epsilon_2} - \sqrt{\epsilon_1}}{\sqrt{\epsilon_2} + \sqrt{\epsilon_1}}$$

This equation is not correct, what is wrong?

Exercise 6:

- Calculate the reflection coefficient for a wave that travels up and reflects at the free-surface of the sea
 - $\rho_{\text{air}}=1.293 \text{ kg/m}^3$, $\rho_{\text{water}}=1025\text{kg/m}^3$
 - $V_{\text{air}}=0.3 \text{ km/s}$, $v_{\text{water}}= 1.4 \text{ km/s}$
- Calculate the reflection coefficient for a GPR wave that travels down in dry sand ($\epsilon_r=4$) and reflects at the saturated sand ($\epsilon_r=30$)

Seismics & GPR
